Belgium

Articles: **CPP BAG – folie (polypropyleenfilm)**

Materials: 100% CPP

We declare that the product described above, to which this declaration of conformity refers to, is in conformity with the essential requirements of the following legislation:

- Regulation EC 1935/2004 – Framework regulation on materials and articles intended to come into contact with food.
- Regulation EC 2023/2006 – Good manufacturing practice for materials and articles intended to come into contact with food.
- Regulation EU 10/2011 and amendments – Plastic materials and articles intended to come into contact with food.

The CPP bag do not contain any dual use additives or substances with specific migration limits (SML).

The above material, under normal and foreseeable conditions of use, is capable of:

- • Coming into contact with the following types of food:

↳ Dry and assimilated foods

↳ Moist / aqueous foods

- • Duration and temperature of handling and storage at which the material/object comes into contact with the food product:

Tested and passed against OM2 (10 days at 40°C)

→ The products are suitable for long-term contact at room temperatures or lower and food contact temperatures from 0°C to 70°C for 2 hours.

- The maximum surface / volume ratio in contact with food used to establish compliance of the material or item:

Theoretical assumption that 1 kg of food is packed with 6dm² of packaging.

Our products are standard products, if they are suitable for packaging all foods then it is not possible to calculate the real area to volume ratio for all applications. Because of this we base ourselves on the theoretical assumption mentioned above.
